/note="Organ: Lung; Vector: pYX-Asc; Site 1: Ecoi Site 2: Not 1; The library was constructed accorr Bonaldo, Lennon and Soares, Genome Research, 6:75:196. Denatured RNA was size fractionated on a liggel. First strand cDNA synthesis was primed with primer containing a Not I site. Double strand cDN size selected according to mRNA size fraction, libwith Ecok I adaptor digested with Not I and their directionally into pX-Asc vector. The library to sequence located between the Not I site and the I is GATAAAGGCCA. Tissue was provided by Mary Hendri

Bonaldo, Lennon and Soares, Genome Research, 6:79
1996. Denatured RNA was size fractionated on a 18
gel. First strand cDNA synthesis was primed with
primer containing a Not I site. Double strand cDN
size selected according to mRNA size fraction, II
with EcoR I adaptor, digested with Not I and then
directionally into pYX-Asc vector. The library ta
sequence located between the Not I site and the p
is GATAAGGCCA. Tissue was provided by Mary Hendri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B1966060 609 bp mRNA linear EST 12-16-2204.x1 Melton Normalized Human Islet 4 N4-HIS 1 Homo se CDNA clone IMAGE:5672623 3' similar to TR:054907 054907 TNI WEAK INDUCER OF APOPTOSIS ;, mRNA sequence.

Site_2: Sal 1: Starting library constructed using
SuperScript Plasmid Library kit (Life Technologies). CDNA
made by oligo-dT priming. Size-selected by column
fractionation; average insert size 1.08 kb. Library was
amplified once on Solid Support and plasmid DNA from
library was prepared. The library DNA was normalized by
method #4 from Bonaldo, Lennon, and Soares 1996 Genome
Research 6:791-806; 0.5 microgram single-stranded library
plasmid DNA was mixed with 5 micrograms PCR product
representing library inserts and hybridized to an Ecot of
20. Single-stranded (unhybridized) plasmids were isolated
by hydroxyapatite chromatography and used to make this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CCTCTAGAGGCTGCCTGGCCTGTTCACGTGTTTTCCATCCCACATAAATACAGTA 1026
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   'y was constructed by Dr. Douglas Melton DNA sequencing by: igton University Genome Sequencing Center For information on ling a clone please contact: Juliana Brown 10fts. harvard.edu) This sequence now available from the IMAGE ritum, for clone orders contact: info@image.llnl.gov luality sequence stop: 412.

(Un-normalized, unamplified): cs"
/note="Organ: Eye; Vector: pCmVSPORTG; Two differe
eyes (75-80 years old) yielded approximately 600 t
dissected RPB/choroid tissue. This in turn yielde
of total RNA and 7 ug of mRNA. A directionally cl
library in the pCMVSPORTG vector was constructed
interary fallowing the protocols of the Superson Possentially following the protocols of the Superson Plant (Intirogen Corp.
chttp://www.invirtogen.com/>). The library code
designation was cs. For this library, cDNA inserted cloned into the Not!/Mull sites of the vector. ES;
analysis was performed on the unamplified library
NIH Intramural Sequencing Center (NISC)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      JAU DP MRNA linear EST 16-

Direct Submitted (1-MAR-2001) Sanger Centre, Hinxton, Cambridges CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clon requests: clonerequest@sanger.ac.uk
On Aug 24, 1999 this sequence version replaced gi:5730221.
During sequence assembly data is compared from overlapping where differences are found these are annotated as variatitogether with a note of the overlapping clone name. Note to variation annotation may not be found in the sequence subm corresponding to the overlapping clone, as we submit seque only a small overlap as described above.

The following abbreviations are used to associate primary numbers given in the feature table with their source datab Em.; EMBL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Info on the WORMPEP database can be found at the their source was fin follows unless otherwise noted all regions were either double-stranded or sequenced with an alternate chemistry oby high quality data (i.e., phred quality >= 30); an attem made to resolve all sequencing problems, such as compressing repeats; all regions were covered by at least one plasmid or more than one MIS subclone; and the assembly was confirmed that a sequencial from part that the sequence was generated from part that the sequence was generated from part that the sequence was generated from part that the sequence was generated from part that the sequence was generated from part that the sequence was generated from part that the sequence was generated from part than the sequence was generated from part than the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HSDJ686N3 110293 bp DNA linear PRI 06 Human DNA sequence from clone RP4-686N3 on chromosome 20q1 Contains the 3' part of the gene for a novel ATP dependent helicase (contains conserved C-terminal helicase domains a DEAD/DEAH boxes), the KIAA1404 gene, a putative novel gene ATSs, GSSs and two CpG islands, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             bacterial clone contigs of human chromosome 20, constructed Sanger Centre Chromosome 20 Mapping Group. Further inform be found at http://www.sanger.ac.uk/HGP/Chr20 RP4-686N3 is from the library RPC14 constructed by the grapheter de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AL049766.14 GI:5763746

/note="Organ: Eye; Vector: pCWVSPORT6; Two different donor eyes (75-80 years old) yielded approximately 600 mg of dissected RPE/choroid tissue. This in turn yielded 340 ug of total RNA and 7 ug of mRNA. A directionally cloned cDNA library in the pCWVSPORT6 vector was constructed at Life rechnologies (Rockville, MD; now part of Invitrogen Corp, essentially following the protocols of the SuperScript Plasmid System (Invitrogen Corp, Plasmid System (Invitrogen Corp, Plasmid System (Invitrogen Corp, Plasmid System (Invitrogen Corp, Chtp://www.invitrogen.com/>). The library code designation was cs. For this library, cDNA inserts were cloned into the Not!/Mull sites of the vector. EST analysis was performed on the unamplified library at the NH Intramural Sequencing Center (NISC)."

```
EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

NCI_CGAP_Ch1 is a cDNA library containing the following

NCI_CGAP_Ch1 is a cDNA library containing the following

tissue(s): Chondrosarcoma Grade II. The library was

constructed according to Bonaldo, Lennon and Soares,

Genome Research, 6:791-806, 1996. First strand cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            67 5 bp . mRNA linear EST 07-NOV-2002 Z0-bap-i-03-0-UI.81 NCI_CGAP_Ch1 Homo sapiens cDNA clone Z0-bap-i-03-0-UI 3', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Library Arrayed by: Dr. M. synthesis was primed with an oligo-dr primer cont
Not I site. Double stranded cDNA was ligated to a
adaptor, digested with Not I, and cloned directic
into pryrab-pac vector. The oligonucleotide used t
the synthesis of first-strand cDNA contains a lit
sequence that is located between the Not I site a
(dT)18 tail. The sequence tag for this library is
TGATCACGCT.
